

Overview

Volatility of fuel prices and the costs of the European Union Emission Trading scheme (ETS) have challenged the European Aerospace and Aviation industry recently. This translates into huge pressure to replace old fleets with modern technology and fuel-efficient aircrafts.

The airport traffic in the region has fallen as a result of the economic instability. Conversely, new travel trends and a growing demand for overseas travel translates to a lack of time for Europe to keep up with the world's biggest aviation hubs. The market thus forces the industry to apply cost-cutting measures while re-examining and optimizing business models by exiting unprofitable investments or consolidating services and infrastructure. It requires the industry players to identify sustainable growth opportunities.

This is where Dentons can help you.

Whichever strategy you have adopted to navigate through market uncertainty, you need an experienced advisor to assess the risks and find the most cost-effective business solutions for you.

Dentons' multi-disciplinary, cross-border teams build upon years of experience representing leading airlines, aircraft and parts manufacturers, airport operators and service providers as well as insurers and financial sector players to provide you with the expertise you need to gain a competitive edge in the demanding aerospace and aviation environment.

Look to Dentons for effective solutions in the following areas:

- M&A and joint ventures
- Reorganization and restructuring
- Competition and regulatory
- Environmental compliance
- Aircrafts and leasing operations financing
- Commercial agreements
- Aircraft maintenance and lease contracts
- Insurance
- Dispute resolution and litigation
