

Overview

Dentons' lawyers and professionals draw on our long history of advising midstream energy clients to offer a full complement of legal advice and services. Our team has extensive experience and deep knowledge of every aspect of the global midstream business, from project inception to product delivery. We strive to consistently and efficiently deliver inventive solutions to the unique problems you face in the midstream energy industry.

Our midstream practice spans the world and includes clients of every size, private and state-owned, who are owners and operators of hydrocarbon processing facilities, pipelines, terminal facilities and storage facilities. We also work with sellers and marketers of energy commodities, shippers, distributors, service providers and industrial consumers of hydrocarbons, with both domestic and cross-border operations.

Look to Dentons' lawyers for the full spectrum of advice on the financing, development and construction of energy transportation projects. We guide you through operation and management of midstream projects, providing counsel on various environmental issues arising from your operations. We also help you navigate the complex regulatory requirements of the midstream industry and the demanding processes involved in acquisitions and divestitures of midstream assets and companies owning pipeline assets. Our lawyers also serve as litigation and dispute resolution counsel in a vast array of disputes which are singular to the midstream industry.

Whatever your midstream energy requirements, we'll collaborate with you to provide the solutions you need.

Representative Experience

- **BP Canada:** Advising on the sale of Natural Gas Liquids (NGL) business to Plains Midstream Canada ULC, a wholly owned subsidiary, for CA\$1.67 billion. This is the most recent of several billion-dollar-plus transactions where Dentons has partnered with BP. The NGL business owns, operates and has contractual rights to a wide range of assets from both production and distribution functions, from extraction through to wholesale distribution of NGL products across Canada and in the Midwest United States.
