

Overview

Infrastructure development is central to the growth of Bolivia's economy, and it is a priority area for the government as it strives for economic and social growth. With the government facilitating the structuring of public-private partnerships (PPP) and outsourcing the design and build, opportunities are opening up for the private sector to take on transport infrastructure upgrades, social infrastructure development and the construction of utilities infrastructure.

To help you capitalize on the opportunity and safeguard yourself against the risks, you need skilled strategic advisors backed by one of the most impressive track records — having worked on many of the country's major infrastructure projects.

You will be guided through each stage of the infrastructure lifecycle in a national and global context by a team with extensive experience and coverage. Rely on our commercial outlook and understanding of the rigors of infrastructure projects. Whether you are a project sponsor, operator, contractor, lender or represent a government entity, benefit from our experience on infrastructure projects across the transport, energy, social, utilities and telecommunications sectors.

Our clients include multi-national building and construction companies, major banks, leading property developers, multinational telecommunications suppliers, multinational utility providers, government authorities, and national distributors of natural gas and water.

Throughout the life of a project, our support is comprehensive—whether you require advice on the project's structure, be it a public-private partnership, joint venture or alliance; due diligence and managing risk; the drafting of deeds and contracts; compliance requirements around government approvals and industry regulation; all aspects of construction; finance and its structuring; or disputes and litigation.

From multi-billion dollar projects for motorways, long distance rail, to multi-million dollar projects for telecommunications towers, natural gas distribution and water reticulation systems, our team has provided innovative and market-leading approaches to move projects forward.

Uniquely, our team is able to fuse our extensive knowledge in the infrastructure and public-private partnership arenas on a national and global basis to drive excellent outcomes for you in your negotiations and in driving your project forward.
