

Overview

Increasingly, economies everywhere need to pay more attention to waste. The amount is growing of unwanted materials produced as by-products in manufacturing or construction; the same holds true of products that wear out and remain in the environment. But the time has passed when we simply discard unwanted materials in a landfill.

At Dentons, you get lawyers who specialize in laws relating to waste, waste management, and the recovery of energy from waste products. We act for public authorities and assist them in developing appropriate contracts for waste collection, recycling and disposal. We partner with clients in developing waste-to-energy projects to recover energy from waste products. Take advantage of our deep experience with biofuel projects which focus on organic wastes to recover usable energy in the form of commercially usable gas.

Whether you are a public or private sector organization we work with you every step of the way, building projects that respond to the challenge of waste management.

Representative Experience

- **CNIM S.A.:** Advising the French engineering and construction company on the drafting, negotiation and implementation of a Fédération Internationale Des Ingénieurs-Conseils (FIDIC) design-build-operate contract, adapted to conform with Azerbaijani law, for the construction and operation of a €346 million state-of-the-art waste-to-energy incineration plant in Baku, and related corporate, commercial, administrative and employment work.
