

Overview

The nature of technology is rapidity and volatility, whereas the law is based on rules and stability. At Dentons we interconnect those spaces. Thanks to our cross-practice approach, we represent a wide range of clients from the IT sector and other industries and can provide you with the stability you need in this constantly changing environment.

We deliver a broad approach and actively advise all industries and public sectors, including financial services, mining, energy, power, government and manufacturing. We advise multinational IT suppliers, venture capital firms, software and energy technology producers and companies from sectors including financial, energy and media.

We can assist you in all of the above areas by:

- Advising on how to secure your R&D process to make sure that all intellectual property developed will belong to you.
- Advising on how to secure your interests in your IT licensing, procurement and maintenance, irrespectively of your position, as a licensee/customer or licensor/provider.
- Advising on various aspects pertaining to your SLAs, that influence your legal position.
- Advising on how to provide and evidence your technology in public procurement processes.
- Advising on project finance based on extensive knowledge of our banking and finance lawyers.
- Mediating disputes with your business partner, both at the pre-litigation and litigation stages.

Our experience and superiority is recognized by international rankings including *Chambers Global* and *The Legal 500 EMEA*. "Sources say that Dentons maintains 'a high standard of professionalism and knowledge' and 'It is a dream to work with the firm.' 'The lawyers are really flexible.'" (*The Legal 500 EMEA*, 2013)
