

Environment and Natural Resources in Bolivia

Overview

Benefit from an environment and natural resources team that works seamlessly with our services in the energy, oil and gas, power and mining sectors. We assist a variety of clients within the extractive and energy businesses, including institutional clients and funds. In the Oil & Gas sector we cover the whole industry chain from upstream to midstream and downstream stages as well as oilfield services companies.

We advise important local and international clients during all stages of project development and execution—from the bidding process and license (concession) applications to the finance, development, construction and ongoing operations of any project. We address issues of environmental impact, environmental audits, protected areas, wildlife, hazardous waste, forestry, emissions, noise, biotechnology, soil pollution and environmental responsibility, among others. We also regularly handle permitting issues before the local and national regulatory agencies.

We join forces with some of the most recognized technical environmental experts in Bolivia to provide comprehensive advice to clients.

Our excellent reputation in these sectors, alongside strong relations we have with various government agencies and entities, makes our Firm a unique leader in the field.

Representative Experience

- **Confidential Client:** Advising this company regarding a contingency resulting from a Toluene Diisocyanate spill at the Tambo Quemado border.
- **Confidential Client:** Advising on compliance with environmental regulations, allowing it to retain agricultural properties in Bolivia and successfully avoid any government-imposed fines.
