

Overview

Our Dentons' Government Contracts practice and our Intellectual Property and Technology practice regularly team to counsel on and litigate issues of ownership and licensing of intellectual property rights under federal government contracts and subcontracts, as well as cybersecurity.

Key service areas include:

- Counsel on protecting IP rights in commercial software, software developed or customized for a federal customer, and technical data delivered under government contracts
- Counsel on protecting IP rights in potentially patentable and patented inventions invented or subsequently reduced to practice before, during or after the performance of a government contract
- Negotiate licenses with federal agencies for patented technology and software, including modifications and customizations to existing technology and software
- Assist with demonstrating that technology, software or other products satisfy the government's requirements
- Litigate against government challenges of IP rights asserted by contractors
- Represent prime contractors and subcontractors in disputes and litigation over IP rights arising out of government subcontracts
- Counsel clients on rapidly changing cybersecurity requirements and risks
