

## Overview

Every major development requires the help of a designer. But there are so many different kinds of arrangements that can be reached with the design team: stand-alone design agreements or agreements where the designer is integrated with the contractor, operator and even financial backer of the project. Should the project use CAD design, BIM or 4D design techniques?

The lawyers at Dentons have been through the process of developing the best design approach for your project and making sure that the design risks are efficiently allocated and reflected as the parties intend. We have done this for projects ranging across industries—from energy to transportation, hotels, roads, bridges, tunnels, schools and prisons. Whatever your project needs, we have been there before.
