The Toxic Substances Control Act: Fundamentals and More

Date and time:
April 19-20, 2016

Location:
Dentons
1900 K Street, NW
Washington, DC 20006
United States

As of July 1, 2015, McKenna Long & Aldridge merged with Dentons US LLP. Join Dentons and Technology Sciences Group, Inc., an affiliate of Dentons, for an overview of the Toxic Substances Control Act (TSCA). Whether you are new to this law or need a refresher, this course will help you better understand the many TSCA requirements regulating the manufacture, import, processing, distribution, use and export of chemical substances and products that contain them.

Presented continuously since 1988, this course remains the best of its kind for attorneys and for regulatory, customs, purchasing, product safety, research and technical professionals. During this intensive day-and-a-half course, we will cover a wide range of topics, including the following:

- The status of congressional efforts to amend TSCA
- The purposes and scope of the TSCA, including the chemical products and commercial activities that fall under its jurisdiction
- How the Environmental Protection Agency (EPA) administers and enforces TSCA requirements and EPA’s enforcement entities under TSCA
- Using the TSCA Inventory to determine what chemicals may be manufactured in or imported into the US
- Complying with TSCA’s many import and export requirements
- Complying with reporting and recordkeeping requirements
- What EPA is doing to manage existing chemicals under TSCA
- Protecting confidential business information when making submissions to the EPA
- How to manage for TSCA compliance within your company
- How to use EPA’s audit policy to identify and correct TSCA violations without incurring gravity-based civil penalties

Early bird pricing $400 (regular $500).
