

Wrap-up by Gabriele Haas and Lars Berensen:

- Energy Storage Technologies are about transforming the energy sector on its way to net zero. Energy Storage Technologies are precedent for the energy transition.
- The economics of the energy storage are getting more attractive, especially for corporation and industrial investors.
- Regulation remains challenging - and probably will be for the future. Regulation seems to move towards the right direction but requires a deep dive analysis before doing any investments in Energy Storage Technologies.
- Independent or despite that the regulations remains complicated, numerous new and innovative business solutions are on their way. Especially in Germany and Europe, the storage business is an evolving and growing segment and an increasingly important part of the energy market.
