

Dentons Flashpoint

Daily Global Situation Report

October 21, 2020

Global Situation Update: October 21, 2020

KEY TAKEAWAYS

The US Justice Department begins a landmark antitrust lawsuit against Google.

With two weeks until the election, the US has surpassed 70 percent of all early voting that took place in 2016.

At least two out of three excess deaths in US relate to Covid-19, per CDC.

Note: This report is based on sources and information deemed to be true and reliable, but Dentons makes no representations to same.

Global

Overnight, confirmed coronavirus cases grew to 41,093,940 in 214 countries and territories, with 1,130,531 deaths.

- An arthritis drug, tocilizumab, that had shown promise in treating severe COVID-19 showed inconsistent results across three **large clinical trials**.
- Studies in Germany and Norway, as well as two reviews focusing on education globally, suggest a renewal of widespread **school closures** would have a limited effect on curbing the spread of COVID-19.
- The value of **global trade** is set to fall by 7 percent to 9 percent in 2020 from the previous year, despite signs of a fragile rebound led by China in the third quarter, according to a United Nations report; global trade recovered somewhat in the third quarter but remains uncertain.

Note: This report is based on sources and information deemed to be true and reliable, but Dentons makes no representations to same.

Markets

The EU saw huge demand for its first issue of coronavirus-related bonds.

- **European shares** slipped on Wednesday as losses in defensive sectors outweighed optimism over encouraging quarterly results from consumer giant Nestle and telecoms equipment maker Ericsson.
- **Asia-Pacific stocks** rose on Wednesday after Wall Street recorded a gain as the White House and Democrats kept stimulus negotiations alive.
- **US stocks** rose Tuesday on investor hopes for a new stimulus deal.
- The top Fed official on financial supervision urged G20 countries to strengthen **short-term funding markets**.
- A decline in the **dollar** gathered pace on Wednesday as Democrats and Republicans inched closer to agreeing another major fiscal stimulus.
- China's **renminbi** climbed to its highest level in more than two years as investor confidence in the country's economic recovery drove gains against the US dollar.
- Moody's downgraded the **credit ratings** of three UK banks, following last week's cut of the country's sovereign debt rating.

Note: This report is based on sources and information deemed to be true and reliable, but Dentons makes no representations to same.

Business

Berkshire Hathaway agreed to pay \$4.1m to the US Treasury Department to settle alleged violations of sanctions against Iran.

- The US Department of Justice charged **Google** with violating anti-trust laws.
- Chinese **box-office ticket sales** overtook those of North America for the first time in history.
- **Netflix's** subscriber boom after lockdowns has slowed, adding only 2.2m new subscribers in Q3 as opposed to 16m and 10m in Q1 and Q2, respectively. South Korea has become a leading source of growth in Netflix subscribers.
- **Snapchat's** owner saw record revenues and advertising in Q3 as advertisers boycotted **Facebook** over the summer.
- **Texas Instruments** reported its first quarterly revenue growth in nearly two years.
- **Goldman Sachs** will pay \$2.8bn and admit wrongdoing to settle charges in the 1MDB scandal.
- **Pioneer Natural Resources** agreed to buy Parsley Energy for \$4.5bn.
- **Fresnillo**, the FTSE 100 precious metals producer, has lowered its gold production forecasts because of the impact of the coronavirus pandemic in Mexico.
- Hong Kong's **Cathay Pacific Airways Ltd** said it would slash 5,900 jobs and end its regional **Cathay Dragon** brand as cost cutting measures.

Note: This report is based on sources and information deemed to be true and reliable, but Dentons makes no representations to same.

Africa

- Lagos, **Nigeria's** capital, imposed a 24-hour curfew as anti-police protests grew throughout the country; officials upped the estimate of prisoners freed by protesters to 2,000. Witnesses report soldiers opening fire on Nigerian protestors in Lagos; Lagos's governor ordered investigations of the shooting.
- African Union observers confirmed that **Guinea's** recent election had been conducted transparently and correctly, contradicting the opposition candidate Diallo who declared victory after his own tally came in; officials have reported three deaths in the post-election standoff.
- Armed insurgents in the **Democratic Republic of the Congo** freed some 1,300 prisoners from a jail in Beni.
- The **Seychelles** imposed a campaign blackout for 24 hours before the start of voting on Thursday.
- Locusts continue to plague **Ethiopia** in what the UN says is the country's worst locus invasion in 25 years.

Note: This report is based on sources and information deemed to be true and reliable, but Dentons makes no representations to same.

Asia

- **Singapore** will launch rapid coronavirus testing for people seeking to attend large-scale events.
- **India's** PM Modi told Indians to maintain virus precautions amid the country's ongoing festival season; India reported over 100,000 new infections yesterday, with over 1,300 deaths.
- **Thailand's** new special tourist visas have seen booming demand in **China**.
- The **Philippines** reported its lowest daily case rise in four weeks.
- **Hong Kong's** unemployment rate rose to 6.4 percent in Q3, the highest it has been since the aftermath of the SARS epidemic in 2004. Officials in Qingdao, the location of **China's** most recent outbreak, said they have found evidence that the coronavirus can survive on frozen foods for longer periods of time. According to the latest Hurun China Rich List, the fortunes of Chinese billionaires rose by \$1.5trn in 2020. Chinese officials promised to sell Chinese vaccines internationally at a "*fair and reasonable price*," with financial help for developing countries.

Note: This report is based on sources and information deemed to be true and reliable, but Dentons makes no representations to same.

Europe

- An independent advisory body urged the **EU** to conduct an overhaul of its budget rules before it starts enforcing them again.
- **Greece** formally asked **EU** countries to halt military exports to **Turkey**.
- The **US** said it would “*immediately*” resume talks with **Russia** over the extension of the nuclear arms control New Start treaty after Moscow agreed to a mutual freeze on atomic warheads.
- The **EU** told **Britain** on Wednesday to make up its mind on Brexit, putting the onus back on London to unlock trade talks.
- **Hungary’s** justice minister tested positive for COVID-19. **France and the UK** reported more than 20,000 new virus cases yesterday; **Russia Spain, Italy and Czechia** reported more than 10,000. At the **Vatican**, Pope Francis wore a mask during public prayer for the first time. **Sweden** imposed its first-ever localized coronavirus restrictions in Uppsala, where residents are urged to socially distance and avoid travel for two weeks amid a virus spike. Ireland imposed a six-week national lockdown. **Greece** recorded a record daily case rise of 667; a top health official said that young people are driving the case rise. The **UK** will place Greater Manchester under the strictest coronavirus restrictions despite opposition from the region’s mayor.
- **UK** government borrowing rose to the highest level on record in the first half of the fiscal year as the pandemic continued to undermine the country’s public finances.

Note: This report is based on sources and information deemed to be true and reliable, but Dentons makes no representations to same.

Europe

Europe has seven states in the top ten outbreak countries with the highest number of active coronavirus cases; globally, there are 11.7 million active cases, and in Europe, 4.3 million.

ACTIVE CORONAVIRUS CASES - OCTOBER 21

Source: Johns Hopkins University

Note: This report is based on sources and information deemed to be true and reliable, but Dentons makes no representations to same.

Middle East

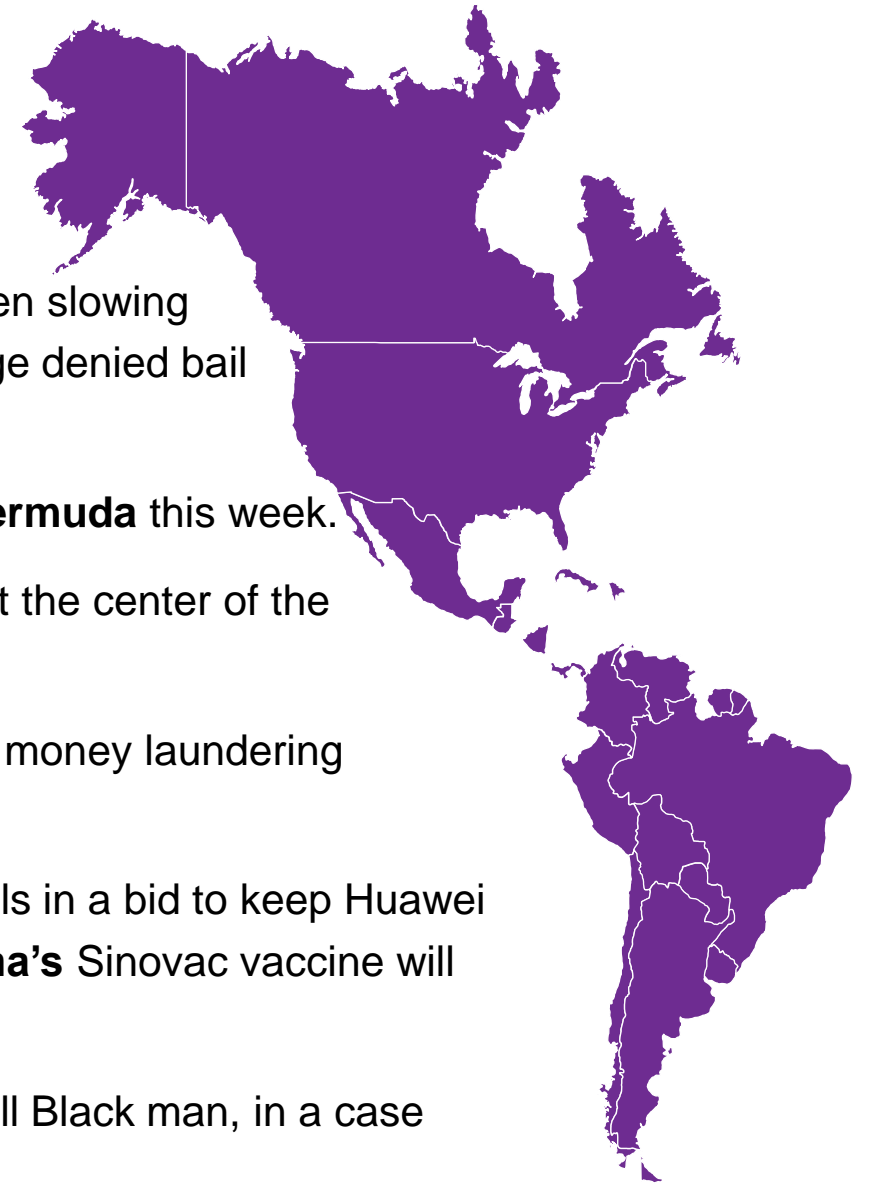

- The **UAE** conducted its first official visit to **Israel**, agreeing on multiple areas of cooperation including visa-free travel between the two countries and a multibillion-dollar fund for private sector cooperation.
- **Saudi** dissident Jamal Khashoggi's fiancé filed a lawsuit in US courts alleging that the Crown Prince of Saudi Arabia ordered his killing.
- **Israel** discovered a new cross-border tunnel from **Gaza**.
Palestinian authorities have closed all tourist attractions in the Gaza Strip to prevent the spread of Covid-19; nearly 500 cases were recorded in the previous 24 hours in the **West Bank** and Gaza Strip and Palestinian negotiator Saeb Erekat remains hospitalized, his condition worsening.

Note: This report is based on sources and information deemed to be true and reliable, but Dentons makes no representations to same.

Americas

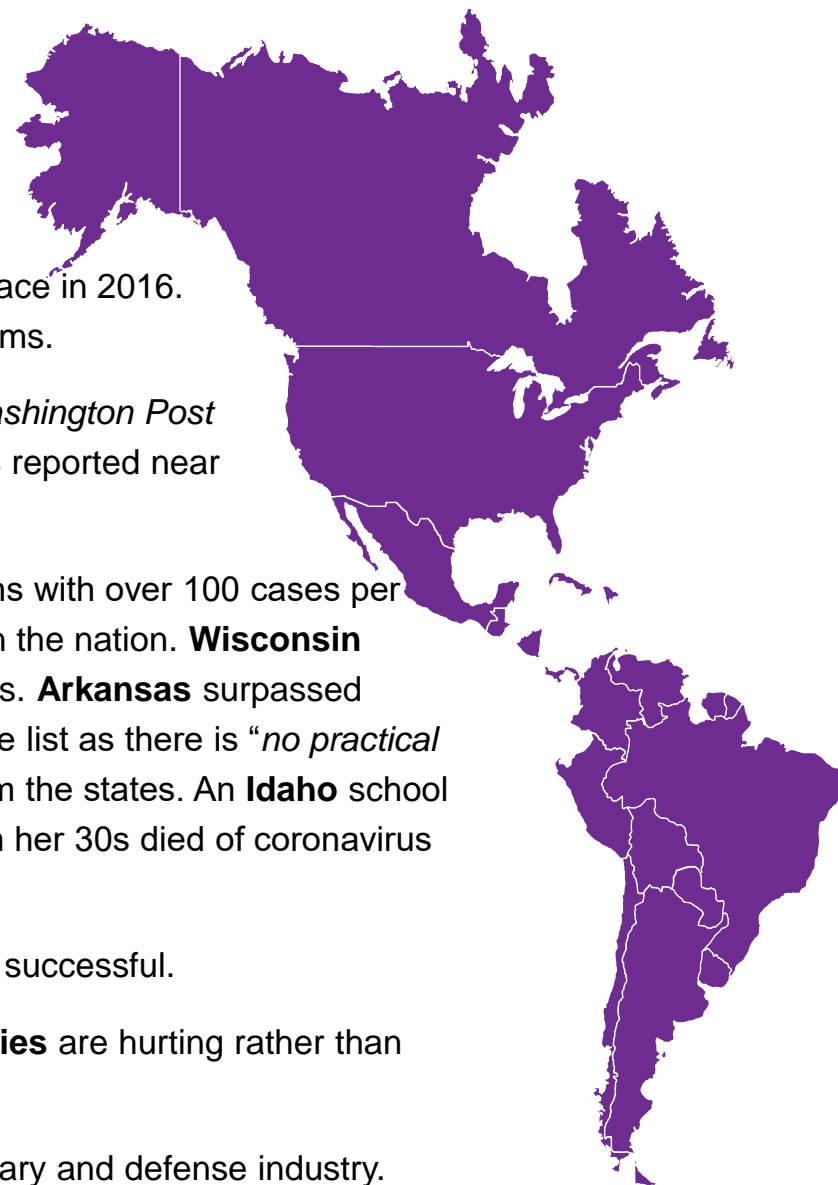

- **Mexico's** health undersecretary said that cases in Mexico, which had been slowing down, were showing signs of potential resurgence in 32 states. A **US** judge denied bail for Mexico's former defense secretary on drug smuggling charges.
- Tropical Storm Epsilon may reach hurricane strength as it approaches **Bermuda** this week.
- **Germany** issued arrest warrants for the two Mossack Fonseca lawyers at the center of the **Panama Papers** scandal.
- **Guatemala** is seeking the arrest of a former communications minister on money laundering charges.
- The **US** offered to help finance **Brazil** telecoms purchases of Huawei rivals in a bid to keep Huawei out of the country's 5G networks. Brazilian state governors said that **China's** Sinovac vaccine will be included in Brazil's immunization program.
- A **Canadian** police officer was found not guilty in the death of a mentally ill Black man, in a case that had sparked nationwide protests.

Note: This report is based on sources and information deemed to be true and reliable, but Dentons makes no representations to same.

Americas: US

- Two weeks until the election, the US has surpassed 70 percent of all **early voting** that took place in 2016. First Lady Melania Trump canceled **campaign attendance**, citing lingering COVID-19 symptoms.
- At least two out of three **excess deaths** in US relate to Covid-19, according to the CDC. A *Washington Post* study found that there have been 300,00 more deaths in the US than in a typical year. The US reported near **58,000 new virus cases**, the highest number since August 5.
- A newly released White House report puts **31 states** in the “*red zone*” for coronavirus infections with over 100 cases per 100,000 people. **Wisconsin and New Mexico** have some of the highest rates of new cases in the nation. **Wisconsin** reported a record case rise over 4,500 as the health department registered a backlog of results. **Arkansas** surpassed 100,000. New York will not add **Connecticut, New Jersey and Pennsylvania** to its quarantine list as there is “*no practical way to quarantine*,” although Gov. Cuomo strongly discouraged nonessential travel to and from the states. An **Idaho** school district cancelled in-person classes after hundreds of teachers staged a “sick-out.” A woman in her 30s died of coronavirus on a plane that was about to leave **Arizona for Texas**.
- Speaker of the House Pelosi said she was “optimistic” that last-ditch **stimulus talks** would be successful.
- A *Financial Times* poll found that more voters now believe President Trump’s **economic policies** are hurting rather than helping the economy.
- The NSA warned that **Chinese state hackers** are targeting US computer networks in the military and defense industry.

Note: This report is based on sources and information deemed to be true and reliable, but Dentons makes no representations to same.

New Findings in SARS-CoV-2 Reinfection

Contributed by the Scowcroft Institute for International Affairs

At the end of August, a 33-year-old man from Hong Kong became the first confirmed case of SARS-CoV-2 reinfection (1). This incidence, along with a few other reinfection events, initially indicated that reinfection was likely to be less severe. Recently, however, three cases have challenged this assumption

In the first case, the reinfected individual was asymptomatic, suggesting that the initial infection did not provide him with enough immunity to prevent reinfection, but that it did prevent him from disease manifestation during the second infection (2). This incidence, along with a few other reinfection events, initially indicated that reinfection was likely to be less severe.

Recently, however, three cases have challenged this assumption. An individual in Ecuador was reinfected with the virus in late summer and experienced a more severe infection the second time around (3). What was notable about this reinfection is that the virus that caused the second infection was a distinctly different variant than the one that caused the initial infection. Thus, the question was raised about whether the virus was mutating to become more deadly.

The first reinfection case observed in the United States was in a 25-year-old Nevada man who experienced a second infection that was more severe than the first (4). The individual became so severely ill that he required hospitalization for the second infection. Similar to the patient in Ecuador, the SARS-CoV-2 variant in the second infection was distinctly different from the variant that first infected the man. Researchers offered three suggestions as to why this man experienced more severe infection when others had experienced less severe infection. The first was that he received a very high dose of the virus the second time, which led to more severe disease. The second was that the variant he contracted the second time was more virulent than the variant he contracted the first time. The third, and most concerning explanation, was that antibody dependent enhancement might be the cause for the more severe illness.

Note: This report is based on sources and information deemed to be true and reliable, but Dentons makes no representations to same.

New Findings in SARS-CoV-2 Reinfection

Antibody dependent enhancement is a significant obstacle in dengue prevention and control because infection with one subtype can lead to a more severe -- and deadly -- infection when the individual encounters dengue a second time (5). It is this particular characteristic that makes it too dangerous to vaccinate individuals who have not yet been infected with dengue. Antibody dependent enhancement has been noted in other coronaviruses, meaning that the presence of antibodies can lead to a more severe infection (6).

This week an 89-year-old woman in the Netherlands became the first person in the world to die from SARS-CoV-2 reinfection (7). The woman had several factors that put her in the high risk category, as she was over the age of 65 and suffering from bone marrow cancer. It is likely that these comorbidities are partly responsible for the severity of the second infection. Additionally, unlike the patient in Nevada, she did not have any antibodies in her blood at the time of her reinfection. Like the patient in Nevada, however, the infections were caused by two genetically different viruses (8).

The finding of genetically different viruses, but no antibody presence again raises the question of if the second variant was more virulent than the first or if the patient's underlying conditions were the reason

she did not recover a second time. As this is the first instance of death after reinfection, it is not possible to make a distinction.

While there are a growing number of cases of reinfection, such events are still rare. Given the small number of cases the same three possibilities outlined by researchers examining the Nevada man's reinfection remain. The potential for a more virulent variant of SARS-CoV-2 is of concern because morbidity and mortality will be higher among individuals infected with that variant. The potential for antibody dependent enhancement would also be concerning for those already infected who may believe they are immune and could have implications for vaccine development.

Charts in Focus: Infection Rates

The sheer number of coronavirus cases in each country certainly paints a picture of where global outbreaks are concentrated, but these numbers alone do not tell the whole story. While the US, India, and Brazil are far and away the world leaders in raw case numbers, other countries may be feeling the impact COVID-19 more severely.

Note: This report is based on sources and information deemed to be true and reliable, but Dentons makes no representations to same.

Charts in Focus: Infection Rates

It is important to also look at cases and deaths per population size, which show that countries like Israel and Belgium are experiencing intense outbreaks, although they do not register in the top 20 countries for total cases. Meanwhile, India's massive population puts the country low on the scale of cases per million people. Given the diversity of different country sizes, metrics such as cases per million and changing average case rates help build a fuller understanding of the outbreaks different countries face.
